SUMMARY

Software Engineer working across full-stack Java development and data engineering — building Spring Boot services, React and Angular front ends, and batch data pipelines over DuckDB, Parquet and Neo4j. Delivered graph-based financial-crime analytics selected in the **top 100 of 400 teams** at **Hack2Future (LTIMindtree × Microsoft)**.

EXPERIENCE

LTIMindtree — Software Engineer, Hyderabad, India

Dec 2025 – Present

- Delivered **two end-to-end full-stack applications** through a 3-month intensive Java Full Stack program, clearing **all 3 milestone assessments**; one shipped with **live map integration** and a **Razorpay payment gateway**.
- Drove the **Angular → React migration** of UI modules, authoring reusable, design-system-aligned components that removed duplicated markup and standardised behaviour across screens.
- Integrated **REST APIs in Spring Boot** with React and Angular front ends, adding request validation and consistent error handling so client-server contracts stayed predictable.
- Contributed to the **internal UI/UX component repository**, shipping shared patterns reused across product screens and cutting one-off implementations.
- Selected in the **top 100 of 400 teams** at **Hack2Future (LTIMindtree × Microsoft)** for a graph-based AML detection prototype (Java, Spring Boot, Neo4j), taking it from concept to a working demo at the Final Build Stage.

PROJECTS

FinGraphAI — AML Detection

Java, Spring Boot, React, Neo4j, Cypher

- Built an **Anti-Money Laundering (AML) detection** app modelling accounts and transactions from the curated layer as a property graph to surface suspicious flows.
- Wrote **Cypher** traversals to detect **cycles, rapid fund movement, layering, structuring and mule-account activity**, scoring each account on the patterns it triggers.
- Exposed results through **Spring Boot REST APIs** and a React console for reviewing account risk, generated alerts and transaction relationships.

LedgerLake — Transaction Data Platform

Python, SQL, DuckDB, Parquet, Neo4j, Java, React

- Built an **end-to-end batch data pipeline** ingesting the **IBM AML synthetic transaction dataset** and landing it through **raw → cleaned → analytics-ready** layers persisted as **Parquet**.
- Implemented **data validation and transformation** stages in Python and SQL, with **DuckDB** producing account- and transaction-level summaries for downstream analysis.
- Added **data-quality checks, structured logging and rerunnable processing**, so a failed or repeated run converges to the same stored state.
- Prepared relationship data for **graph loading in Neo4j** that feeds the FinGraphAI AML detection app — closing the loop from raw transactions to analyst-facing patterns.

Ranger — Receipt-Based Spending Analytics

Java 21, Spring Boot, React, TypeScript, PostgreSQL, Firebase Auth, Gmail API, Jsoup

- Built a **full-stack spending analytics** app that parses HTML receipt emails into line items, fees and totals, then visualises spending by category.
- Integrated the **Gmail API behind Firebase Authentication**, verifying the authorised mailbox matches the signed-in account and scoping every record to its owning user.
- Designed **rule-based parsing with per-message ID tracking** to make imports **idempotent**, so re-syncing a mailbox never duplicates a receipt; used **BigDecimal** and PostgreSQL **NUMERIC(12,2)** for money-critical arithmetic.

DriveU — Driver Booking Platform

Java, Spring Boot, Angular, Spring Security, Razorpay, AI Integration

- Co-built a **full-stack driver booking** platform spanning map-based driver discovery, slot selection, booking and payment, with a **Razorpay payment gateway** and an AI-powered in-app chatbot.
- Implemented **role-based access control** with **Spring Security** across User, Admin and Super Admin tiers, gating booking approval and admin dashboards.

TECHNICAL SKILLS

Languages: Java, Python, SQL, PL/SQL, TypeScript, JavaScript
Backend: Spring Boot, Spring Security, Spring Data JPA / Hibernate, REST APIs, OAuth 2.0
Frontend: React, Angular, Next.js, TypeScript, HTML/CSS, Tailwind CSS
Data Engineering: DuckDB, Parquet, ETL/ELT Pipelines, Data Validation, Data Quality, Data Modeling
Databases: Neo4j, Cypher, PostgreSQL, MySQL
Cloud & Tools: AWS Glue, Git/GitHub, Maven, JUnit, Postman, Linux
AI: AI Agent Development, LLM Integration, Prompt Engineering, Generative AI

EDUCATION

B.E., Electronics and Communication Engineering — K. Ramakrishnan College of Engineering, Trichy — 2021 – 2025 | CGPA 8.56 / 10

CERTIFICATIONS

- Google Gemini AI Agent Development — Certified Partner Specialist (Google)
- Claude Developer — Foundations (Anthropic)
- AI Agent Development using Python and Generative AI (Vanderbilt University)
- Microsoft AI Fundamentals for Developers (Microsoft)
